**Claims 2, 3, 4 and 5 are allowable.**

**Claims 1, 6, 7 and 8 are patentable under 35 U.S.C. 102(b) over Derudder (U.S. Patent No. 5,139,052).**

The present invention is not anticipated by Derudder.

Applicant's invention as claimed in claim 1 comprises a shed forming device with two or more sets of hooks. These sets of hooks consist of two complementary hooks. The complementary hooks work together with one pulley. A number of first pulleys work together with a first set of hooks that are provided in an upper row. A number of second pulleys work together with corresponding second sets of hooks in an upper row. A number of second pulleys work together with a second set of hooks in a lower row.

Those features are not found in Derudder

Derudder discloses, on the other hand, a device with one or more sets of hooks consisting of two complementary hooks (11 and 12). The complementary hooks work together with more

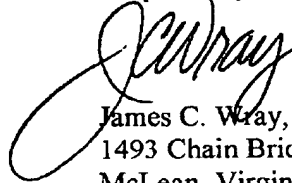

than one pulley (14, and 17). The pulleys work together with the same set of hooks at different heights, whereby corresponding pulleys of other sets of hooks work at the same height.

Claims 6, 7 and 8 are dependent on claim 1 and distinguish the invention from Derudder in the same manner as claim 1. Derudder's 11' and 12' are not a single lifting element (3) as claimed in Claim 6.

### CONCLUSION

Reconsideration and allowance are respectfully requested.

Respectfully,
